

Call for projects SUMMER CAMP

December 01, 2015 --> February 28, 2016

Art, creativity, sustainability, innovation, technology, artist residencies, workshops, labs, collaborative process and critics / Immersion

Presentation:

Summer camp is an international meeting of artists and non-artists who question the future of the contemporary world. How can art today enlighten us on the new world order?

One possible path is to live collaborative experiences. We are more creative reflecting collectively than staying alone in our corner, centered on ourselves and claiming paternity for a creation. How can we think together today, for the improvement of our world?

This utopia can gain strength, influence through localized micro-actions and “positive contaminations.”

During 3 months, the art center Pensamento tropical opens its doors for an experimental and artistic incubation. Proposals of residencies, workshops, labs, and other creative projects dealing with art, sustainability, innovation, technology, collaborative processes, social critique, immersion, can be sent.

We are guided by these questions:

Does transversality offer us a broader view of our world?

Do collaborative process give us a broader view of our world?

How does experience nourish us?

Do results matter so much?

Who can benefit from the pensamento tropical summer camp ?

Artists and non-artists in all possible and imaginable fields

Any person who vibrates to the sound of life

What is tropical thinking?

Tropical thinking is a concept under construction, not fully defined. It occurs mainly through a close relationship with temperature, in both a physical and abstract way (temperature of emotions, tears, meteorology of bodies ...). It is a thought that relates to the present and its context. It develops following the path where one travels. It is definitely a collaborative thinking.

What is the Pensamento tropical Art Center?

Pensamento tropical is an art center located in the heart of a rich ecosystem. It is a production office that promotes international exchanges and develops new models of production and dissemination in a globalized context.
